## How to Use Anti-Spyware Tools

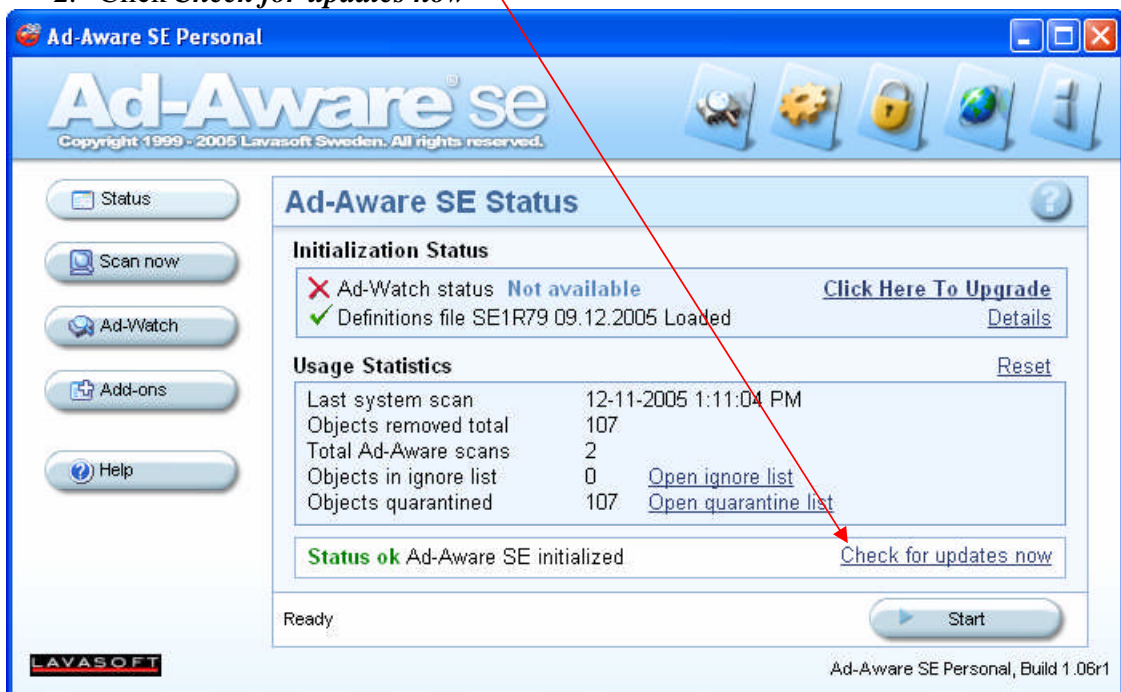

Spyware are programs that get installed on your computer without your permission. Some spyware is relatively harmless, and some spyware can destroy your computer. Most anti-virus programs do not remove or prevent spyware, so it's important to install, update and run anti-spyware tools regularly. You should update and run your anti-spyware tools every week if possible.

This document provides instructions for updating and running the free versions of Ad-Aware, Spybot Search & Destroy, and Spyware Blaster.
